**EXPERIENCE**

Senior Software Engineer — Pinecrest Media | Nov 2023 – Present

- Owned query performance for the primary datastore, profiling and rewriting queries to cut database load by 45%.
- Participated in sprint planning with product managers.
- Wrote SQL queries to pull weekly reports.
- Added monitoring dashboards and alerts for backend services and responded to production incidents on-call.
- Fixed bugs in an internal Python reporting script used by the finance team.
- Read messages from a Kafka topic in a batch job.
- Wrote a few unit tests for new features.

Software Engineer II — Northwind Logistics | Jul 2020 – Sep 2023

- Designed and owned a production order-routing service in Go serving 3,000 requests per second, from design review through on-call.
- Mentored two junior engineers through code review and pairing sessions.
- Updated internal documentation for the team wiki.
- Led a zero-downtime migration of a 4 TB PostgreSQL database to a sharded cluster, including schema redesign.
- Implemented backend endpoints for account management in a Java service used by 40,000 users.
- Supported customer escalations with the support team.

Software Engineer — Bluefin Analytics | Dec 2018 – May 2020

- Built event-driven consumers on Kafka with idempotent processing and retries across services.
- Joined the on-call rotation for an internal tool.
- Built and maintained REST API services in Python and Go handling customer orders in production.
- Designed PostgreSQL schemas and indexes for a billing service and optimized slow queries.
- Attended weekly team meetings and demos.
- Led the rewrite of a monolithic Python backend into versioned API services, cutting p99 latency by 60%.
